

# SOLUTION

The eco-friendly alternative to water softeners using proprietary impulse frequencies to soften your water while solving mineral scale problems.

**K-2 Model:** 9 GPM | 1 1/2 inch pipes  
apartments, cottages, hot tubs

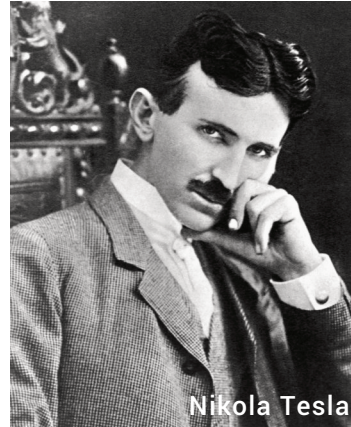

**K-10 Model:** 44 GPM | 2 inch pipes  
residential homes, small swimming pools

**K-25 Model:** 110 GPM | 3 inch pipes  
large swimming pools, light commercial

Scientific research studies prove the link between how mineral scale build-up causes water heaters to consume more energy and lower equipment lifespans.

## MINERAL SCALE EFFECTS

Your water pipes, water heater and appliances are certain to have hidden mineral scale concerns.

## PREVENTS

new mineral scale from forming

## REMOVES

mineral scale and rust build-up

## PROTECTS

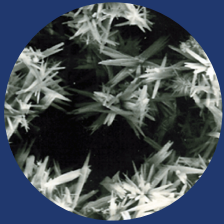

against internal future corrosion

*against scale & rust*

# STOPS

SCALING ON SURFACES

BEFORE

AFTER

The technology uses wobbling impulse frequency distributions (3-32 kHz) to change minerals from irregular shaped crystallized spheres into smooth rod-shaped structures.

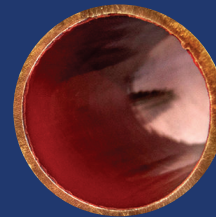

This change **prevents** minerals, such as Calcium (Ca) and Magnesium (Mg), from bonding to each other and onto surfaces.

# SANITIZES

WATER PIPING SYSTEMS

BEFORE

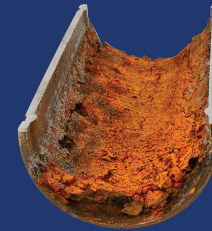

AFTER

Mineral scale deposits are a breeding ground for pathogens (bacteria, mold, micro-organisms) and by continuously removing scale and rust particles you will keep your water pipes, appliances, and water heater clean.

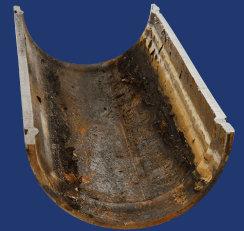

Our impulse frequency device gently **removes** decades of mineral scale build-up and embedded rust particles, and flushes it away with your home's natural water flow.

# PREVENTS

RUST AND CORROSION

BEFORE

AFTER

Corrosion leads to perforation, weakened pipe walls, joints and equipment failure. This is due to iron and copper oxidation when hard water minerals come into contact with metal surfaces. The Kashyap impulse frequency descaler creates a protective metal-carbonate layer on internal metal surfaces.

This electrophoresis effect **protects** surfaces from aggressive corrosion causing substances.
